The National Park Service, Natural Resource Program Center publishes a range of reports that address natural resource topics of interest and applicability to a broad audience in the National Park Service and others in natural resource management, including scientists, conservation and environmental constituencies, and the public.

The Natural Resource Report Series is used to disseminate high-priority, current natural resource management information with managerial application. The series targets a general, diverse audience, and may contain NPS policy considerations or address sensitive issues of management applicability.

All manuscripts in the series receive the appropriate level of peer review to ensure that the information is scientifically credible, technically accurate, appropriately written for the intended audience, and designed and published in a professional manner. *[Peer review manager: insert one of the following peer review qualifying statements below – 1 & 2 can be combined:]*

- 1. This report received informal peer review by subject-matter experts who were not directly involved in the collection, analysis, or reporting of the data.*
- 2. Data in this report were collected and analyzed using methods based on established, peer-reviewed protocols and were analyzed and interpreted within the guidelines of the protocols.*
- 3. This report received formal peer review by subject-matter experts who were not directly involved in the collection, analysis, or reporting of the data, and whose background and expertise put them on par technically and scientifically with the authors of the information.*
- 4. This report received formal, high-level peer review based on the importance of its content, or its potentially controversial or precedent-setting nature. Peer review was conducted by highly qualified individuals with subject area technical expertise and was overseen by a peer review manager.*

Views, statements, findings, conclusions, recommendations, and data in this report are those of the author(s) and do not necessarily reflect views and policies of the National Park Service, U.S. Department of the Interior. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the National Park Service.

This report is available from *[Your Network/Division etc. and URL]* and the Natural Resource Publications Management website (<http://www.nature.nps.gov/publications/NRPM>). *[This paragraph can be modified to meet your specific needs].*

Acknowledgments

The design of this ecological monitoring program was supported by the National Park Service in cooperation with the California Department of Fish and Game, the U.S. Department of Commerce and the National Oceanographic and Atmospheric Administration's National Marine Sanctuary Program. More than 350 scientists, resource managers and boat captains from many academic institutions and resource management agencies participated in this endeavor. Of particular note were the sustained efforts of G. E. Davis, D. V. Richards, J. M. Morgan, J. E. Mondragon, D. Lerma, M. D. Moss, K. J. Moore, J. M. Engle, M. D. Conlin, T. J. Herrlinger, T. W. Anderson, J. D. Lewis, D. C. Canestro, S. L. Kim, D. Forcucci, and J. W. Trone. Their broad experience greatly strengthened the experimental design and resulting monitoring protocols.
